

MEDICAL ANALYSIS REPORT

Patient Demographics

Patient Name:	youssef amr	Sex:	Male
National ID:	30105012345678	Lab Name:	Al Mokhtabar labs

Clinical Factors & Lab Results

MEDICAL FACTOR	PATIENT VALUE	REFERENCE / CONTEXT
Age	61.0 years	Adult (18+ years)
Chest Pain Type (CP)	4	1:Typical, 2:Atypical, 3:Non-anginal, 4:Asymptomatic
Resting Blood Pressure	190.0 mmHg	Normal: <120 mmHg
Cholesterol Level	320.0 mg/dL	Desirable: <200 mg/dL
Fasting Blood Sugar	1	Normal: <120 mg/dL
Resting ECG	1	Normal ECG Pattern
Max Heart Rate Achieved	95.0 bpm	Target: ~159 bpm
Exercise-Induced Angina	Yes	Normal: Negative (No)
ST Depression (Oldpeak)	3.2	Normal: 0
ST Slope	2	1:Upsloping, 2:Flat, 3:Downsloping

AI Diagnostic Analysis

Calculated Cardiac Risk Score: 96.0%

Top Features Influencing This Prediction

This score represents the statistical probability based on clinical factors.

Primary Risk Contributors (SHAP Analysis)

SHAP Waterfall — Feature Contributions

Factors pushing the bar to the **right** increase risk, while factors to the **left** decrease it.

| Clinical Interpretation

The patient's data may suggest a high likelihood of cardiovascular issues, which could indicate an increased risk of heart disease. The top influencing features, including ST slope, oldpeak, and chest pain type, may contribute to this risk. Immediate medical consultation is strongly recommended to discuss these findings and determine the best course of action.

| Medical Recommendations

- Schedule an appointment with a cardiologist as soon as possible to discuss the patient's risk factors and develop a personalized plan
- Undergo a thorough medical evaluation, including diagnostic tests and exams, to assess cardiovascular health
- Make lifestyle changes, such as adopting a healthy diet and exercise routine, to help reduce the risk of heart disease
- Monitor and manage any existing health conditions, such as high blood pressure or high cholesterol, to minimize their impact on cardiovascular health
- Discuss medication options with a healthcare provider to determine if any prescriptions may be necessary to help mitigate the patient's risk
